The Ultimate Technology to Treat Sagging Skin

- **ATTIVA® Subdermal Induced Heat (S.I.H.)** Technology is the result of 5 years of technical and scientific research. It is protected by 3 international patents. Our technology is intended for physicians seeking for an efficient and safe solution to treat the signs of aging without surgery. ATTIVA® S.I.H. Technology offers patients dramatic aesthetic enhancements to the quality of their skin with no downtime, no scarring and with immediate results. A new benchmark in the medical treatment of ageing loose skin.

Specific Contouring and Tightening Treatments that Fulfill the Customer's Needs

- Women and Men today are demanding efficient and safe procedures from their physician to enhance and improve their appearance. As they search for the best solution, they realise that not all Radio Frequency (RF) technologies are the same. They understand the importance of the safety of a temperature controlled procedure to ensure the integrity of their skin. Thanks to the high precision of the ATTIVA® treatment, the physician can obtain the best results in terms of skin tightening and body contouring, without scars and with minimal downtime.

Which Procedure for Which Result?

- The most requested treatments by patients over the age of 45 are; to correct the signs of the aging, to tighten loose skin and to treat any excess fat in the face and the body. The biggest areas of concern are the face, the neck and décolleté, the underarms, the abdomen and the inside of the thighs. Using ATTIVA® S.I.H. Technology for the treatment of skin laxity in problem areas such as the underarms and the inside of the thighs means a simple, safe and effective procedure that provides a solution to satisfy an increasing demand from patients.

ATTIVA®

How does it work?

- **ATTIVA® S.I.H. Technology** is a PATENTED subdermal induced heat technology based on the modulation of different current types; continuous, fractional and sequential. By uniformly heating the subdermal tissue layers with a powerful but controlled energy, ATTIVA® allows a complete mastering of results with the highest

precision. At first the soft tissue is contracted, then there is shrinkage of the collagen structure of the dermis which causes a stimulation of the fibroblast activity in reaction to the procedure's trauma. This fibroblast activity stimulates the elastin production and the synthesis of new collagen.

Safety

- To ensure the patient's safety, ATTIVA® S.I.H. Technology has a built-in Double Temperature Control on the cannula. This combined with an external thermo control camera allows a constant monitoring of the probe inside the tissues and of the superficial skin temperature. ATTIVA® S.I.H. Technology delivers optimal results through a minimally-invasive procedure, for facial lifting, body contouring and skin tightening.

The double real time temperature control and the high precision of the thermocouple provide an unequalled safety level during the entire procedure with a complete focus on the treated area.

The proprietary software and patented subdermal induced heat technology allows the practitioner precise control of the thermal diffusion from the deep tissues up to the skin's surface.

Non-Surgical Vaginal Rejuvenation

ATTIVA® “Gyne” has been designed for female intimacy. It helps to combat symptoms such as vaginal laxity, dryness and mild stress urinary incontinence (S.U.I.) that can be caused by aging, childbirth and hormonal changes. The Attiva “Gyne” treatment can be performed in a clinic by a nurse or a physician’s assistant under supervision of the physician. The patented Attiva “Gyne”

treatment head can be used intra-vaginally and can also be used on the labia majora. Thanks to its patent, the Attiva probe rotates and allows a minimally invasive and extremely soft treatment. The Subdermal Induced Heat (S.I.H.) technology stimulates the cells producing collagen by heating the tissues inside the vagina and on the labia. The tightening effect is noticeable within 4 to 6 weeks.

PATIENT'S BENEFITS

Patient's benefits

People today demand efficient and safe procedures from their physician in order to improve their skin quality and body contour. The realization that exogenous treatments are not enough to solve their skin problems, coupled with the fear of surgery, lead many to opt for non-surgical minimally invasive technology.

ATTIVA® S.I.H. Technology, achieves long lasting results with a minimal downtime and no excisional scars.
